

```

%%writefile array1.cpp

#include<iostream>
using namespace std;

void printArray(int arr[],int size){
    cout<<"printing the array"<<endl;
    //print the array
    for(int i=0;i<size;i++){
        cout<<arr[i]<<" ";
    }
    cout<<"printing done"<<endl;
}

int main(){
    //declare an array
    int number[15];
    //access the number
    cout<<"value at 3 index:"<<number[3]<<endl;

    //initialise an array
    int second[3]={5,7,11};
    //access an element
    cout<<"value at 2 index:"<<second[2]<<endl;

    int n=15;
    int third[15]={2,7};
    printArray(third,15);

    int m=10;
    int fourth[10]={0};
    printArray(fourth,10);

    //initializing all location with 1
    // int fourth[10]={1};// not possible

    // size of array means memory occupancy of array
    int thirdSize=sizeof(third)/sizeof(int);
    cout<<"size of third is "<<thirdSize<<endl;

    int fourthSize=sizeof(fourth)/sizeof(int);
    cout<<"size of fourth is "<<fourthSize<<endl;

    // character array
    char ch[5]='a','b','c','d','e';
    cout<<ch[3]<<endl;

    return 0;
}

```

 Overwriting array1.cpp

```

!g++ array1.cpp -o array1
!./array1

```

 value at 3 index:0
value at 2 index:11
printing the array
2 7 0 0 0 0 0 0 0 0 0 0 0 0 0 printing done
printing the array
0 0 0 0 0 0 0 0 0 0 printing done
size of third is 15
size of fourth is 10
d

✓ Find Maximum and Minimum number in array

```

%%writefile array2.cpp

#include<iostream>
#include <climits>
using namespace std;

int getMin(int num[],int n){
    int min=INT_MAX;
    for (int i=0;i<n;i++){
        if(num[i]<min){
            min=num[i];
        }
    }
    return min;
}

```

```

    }
}
//returning the min value
return min;
}

int getMax(int num[],int n){
    int max=INT_MIN;
    for (int i=0;i<n;i++){
        if(num[i]>max){
            max=num[i];
        }
        //predefined function
        // max=max(max,num[i])
    }
    return max;
}

int main(){
    int size;
    cin>>size;
    int num[100];
    for(int i=0;i<size;i++){
        cin>>num[i];
    }
    cout<<"Max value is "<<getMax(num,size)<<endl;
    cout<<"Min value is "<<getMin(num,size)<<endl;
    return 0;
}

```

 Overwriting array2.cpp

```
!g++ array2.cpp -o array2
!./array2
```

 6
2 33 29 8 7 1
Max value is 33
Min value is 1

▼ Update the array

```
%%writefile array3.cpp
```

```

#include<iostream>
using namespace std;

void update(int arr[],int n){
    cout<<endl<<"Inside the function"<<endl;
    //updateing the array's first element
    arr[0]=120;
    //printing the array
    for(int i=0;i<3;i++){
        cout<<arr[i]<<" ";
    }cout<<endl;
    cout<<"Going back to main function"<<endl;
}

int main(){
    int arr[3]={1,2,3};
    update(arr,3);
    //printing the array
    cout<<endl<<"Printing in main function"<<endl;
    for(int i=0;i<3;i++){
        cout<<arr[i]<<" ";
    }
    cout<<endl;
    return 0;
}

```

 Overwriting array3.cpp

```
!g++ array3.cpp -o array3
!./array3
```

 Inside the function
120 2 3
Going back to main function

```
Printing in main function
120 2 3
```

✓ Sum of all number in array

```
%%writefile array4.cpp
```

```
#include<iostream>
using namespace std;

int getSum(int arr[],int n){
    int sum=0;
    for (int i=0;i<n;i++){
        sum+=arr[i];
    }
    return sum;
}

int main(){
    int size;
    cin>>size;
    int num[100];
    for(int i=0;i<size;i++){
        cin>>num[i];
    }

    cout<<"Sum value is "<<getSum(num,size)<<endl;
    return 0;
}
```

 Overwriting array4.cpp

```
!g++ array4.cpp -o array4
!./array4
```

 6
5 8 3 8 2 1
Sum value is 27

✓ Reverse an Array

```
%%writefile array5.cpp
```

```
#include<iostream>
using namespace std;

void reverse(int arr[],int n){
    int start=0;
    int end=n-1;
    while(start<=end){
        swap(arr[start],arr[end]);
        start++;
        end--;
    }
}

void printArray(int arr[],int n){
    for(int i=0;i<n;i++){
        cout<<arr[i]<<" ";
    }
    cout<<endl;
}

int main(){
    int arr[6]={5,7,-2,10,22,-2};
    int brr[6]={4,7,5,10,21};
    reverse(arr,6);
    reverse(brr,5);

    printArray(arr,6);
    printArray(brr,5);
    return 0;
}
```

 Overwriting array5.cpp

```
!g++ array5.cpp -o array5
!./array5
```

```
↔ -2 22 10 -2 7 5
   21 10 5 7 4
```
