

```
%%writefile switch1.cpp
```

```
#include<iostream>
using namespace std;
int main(){
    int num=2;
    cout<<endl;
    switch(num){
        case 1: cout<<"First"<<endl;
            break;
        case 2: cout<<"Second"<<endl;
            break;
        default: cout<<"It is default case"<<endl;
            //default case is optional
    }
    cout<<endl;
}
```

 Writing switch1.cpp

```
!g++ switch1.cpp -o switch1
!./switch1
```

 Second

✓ Calculator

```
%%writefile switch2.cpp
```

```
#include<iostream>
using namespace std;
int main(){
    int a,b;
    cout<<"Enter the value of a : "<<endl;
    cin>>a;
    cout<<"Enter the value of b : "<<endl;
    cin>>b;
    char op;
    cout<<"Enter the operation : "<<endl;
    cin>>op;

    switch(op){
        case '+':cout<<(a+b)<<endl;
            break;
        case '-':cout<<(a-b)<<endl;
            break;
        case '*':cout<<(a*b)<<endl;
            break;
        case '/':cout<<(a/b)<<endl;
            break;
        case '%':cout<<(a%b)<<endl;
            break;
        default : cout<<"enter a valid operation"<<endl;
    }
}
```

 Writing switch2.cpp

```
!g++ switch2.cpp -o switch2
!./switch2
```

 Enter the value of a :
12
Enter the value of b :
6
Enter the operation :
*
72

✓ Notes Count

```
%%writefile switch3.cpp
```

```
#include<iostream>
```

```

using namespace std;
int main(){
    int amount;
    int n1,n2,n5,n10,n20,n50,n100,n500;
    n1=n2=n5=n10=n20=n50=n100=n500=0;
    cout<<"Enter the total amount:";
    cin>>amount;
    switch(amount>=500){
        case 1:
            n500=amount/500;
            amount-=n500*500;
            break;
    }

    switch(amount>=100){
        case 1:
            n100=amount/100;
            amount-=n100*100;
            break;
    }

    switch(amount>=50){
        case 1:
            n50=amount/50;
            amount-=n50*50;
            break;
    }

    switch(amount>=20){
        case 1:
            n20=amount/20;
            amount-=n20*20;
            break;
    }

    switch(amount>=10){
        case 1:
            n10=amount/10;
            amount-=n10*10;
            break;
    }

    switch(amount>=5){
        case 1:
            n5=amount/5;
            amount-=n5*5;
            break;
    }

    switch(amount>=2){
        case 1:
            n2=amount/2;
            amount-=n2*2;
            break;
    }

    switch(amount>=1){
        case 1:
            n1=amount/1;
            amount-=n500*1;
            break;
    }

    cout << "500 = " << n500 <<endl;
    cout << "100 = " << n100 <<endl;
    cout << "50 = " << n50 <<endl;
    cout << "20 = " << n20 <<endl;
    cout << "10 = " << n10 <<endl;
    cout << "5 = " << n5 <<endl;
    cout << "2 = " << n2 <<endl;
    cout << "1 = " << n1 <<endl;
}

```

 Writing switch3.cpp

```

!g++ switch3.cpp -o switch3
!./switch3

```

 Enter the total amount:1330
500 = 2
100 = 3

```
50 = 0
20 = 1
10 = 1
5 = 0
2 = 0
1 = 0
```

▼ Nested Switch

```
%%writefile switch4.cpp
```

```
#include<iostream>
using namespace std;
int main(){
    int ch='1';
    int num=1;
    cout<<endl;
    switch(ch){
        case 1: cout<<"First"<<endl;
            break;
        case '1': switch(num){
            case 1: cout<<"value of num is : "<<num<<endl;
                break;
            }
            break;
        default: cout<<"It is default case"<<endl;
    }
    cout<<endl;
}
```

 Writing switch4.cpp

```
!g++ switch4.cpp -o switch4
!./switch4
```

 value of num is : 1
